

32. (New) The camera of claim 30, wherein the profile comprises an image data portion in which the image is stored.

33. (New) The camera of claim 30, wherein the camera is a red-green-blue device.

34. (New) An article comprising one or more machine-readable storage media containing instructions that when executed enable a processor to:

- receive profile information associated with an image;
- generate a profile based on the received profile information;
- identify the profile to a color management system; and
- process the image based on the profile.

35. (New) The article of claim 34, wherein the instructions when executed enable the processor to store a portion of the profile information in a profile file.

36. (New) The article of claim 35, wherein the instructions when executed enable the processor to:

- associate a filename with the profile; and
- communicate the filename to the color management system.

REMARKS

The title of the invention has been objected to as not being descriptive; Figure 3 is objected to as not being properly labeled as prior art; claims 1-14 and 16-21 are rejected under 35 U.S.C. § 102(e) as being anticipated by Edge, et al. (Patent No. 6,088,038); and claim 15 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Edge et al.
